

### **VandTek expo off to a good start**

VandTek 09 has recently completed four successful trade fair days at Odense Congress Center, Denmark. A total of 4,004 professionals from the whole of Denmark attended this new water expo. Great satisfaction was felt amongst exhibitors, the cooperating partners and MCH Exhibition Centre Herning, organizers of VandTek 09.

### **Ready for a repeat performance of VandTek in 2012**

"We have had four days of seeing satisfied exhibitors and visitors meeting in a really good atmosphere. It pleases us that we, with the trade, have agreed to repeat VandTek in 2012;" says VandTek Project Manager, Mona Jakobsen, of MCH Exhibition Centre Herning, organizers of the fair.

### **VandTek a success for exhibitors and visitors alike**

"It has exceeded all our hopes. There was an incredibly good atmosphere and we have had many visitors to our stand. We have received two large, direct orders during the expo, and it is many years since I have experienced that at a trade fair. So we are extremely satisfied and will certainly be present again in 2012," says senior consultant, Niels Winther of Danfoss.

It is the first time that such a large expo, exclusively devoted to the water trade, has been held in Denmark. 169 exhibitors made use of the opportunity and presented no fewer than 82 new products – including 19 world 'firsts'. The fair also presented the Nordic Waste Water Conference, DANVA's Annual Course and theme days:

At VandTek 09, we have assembled some of the trade's well-established activities and this has strengthened the fair and made it even more attractive to the whole water industry. I think we can say that VandTek 09 has been an unqualified success. We are very pleased that the whole trade has backed this concept and we look forward to being here again in three years," says event manager Kristian Friis of the Danish Water and Waste Water Association.

**Information:** VandTek'09 is a new conference/exhibition for the water and waste water trades. The fair was organized by MCH Exhibition Centre Herning in cooperation with the Danish Water and Waste Water Association., the Scandinavian Society for Trenchless Technology, the Danish Association of Environmental Technology Companies, The Joint Organization of Private Waterworks in Denmark and the Danish Waste Water Technology Association.

The next VandTek is slated for 2012.
